

Carriage Roller

Carriage Rollers - Carriage rollers are particularly designed bearings which are utilized on lift masts in order to help them work within difficult environmental conditions. Lift masts are normally subjected to oscillations, shocks, vibrations and high dynamic and static loads. This equipment is frequently exposed to environmental influences such as heat, dust, cold, contamination, aggressive ambient air and moisture. Therefore, the lift masts' guidance arrangements should be particularly strong and have a particular high load carrying capacity.

So as to help compete in numerous various environmental surroundings, carriage rollers were designed for various lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
