

Aerial Work Platform

Aerial Work Platform - There are lots of accessories designed for forklifts that can be utilized in order to help expand the capabilities of your forklift and allow you to lift objects, handle materials with less effort or to accomplish clean-up jobs.

Many of the attachments are specially designed so as to fit on the forks themselves. Fork extensions for example, are utilized if you need a lot more blade length, which increases lifting capacity. Fork extensions come in lengths ranging from 48-120 inches. Triangular or rounded attachments are another kind used whenever transporting rolled material to be able to ensure it does not roll off of the standard flat blades.

Examples of lifting attachments consist of pivoting and telescoping crane or boom accessories. They could come in quite a few various kinds and are normally intended for transferring poles, metal bars, lumber and different sort of bulky objects. Other accessories like various styles of hooks and hook plates are offered to pick up things with a chain or sling. Magnetic lifters and slab lifters are other things that could be utilized along with hook attachments. Slab lifters are specialized accessories which are used for carrying different materials that are delivered in a sheet or slab format. Rug rams or carpet poles are other lifting tools that attach to your lift truck so as to make transferring rolls of carpet much easier. The attachment hooks onto the forklift's blades and has a pole which goes through the center of the carpet roll.

There are many other types of forklift accessories which can be meant for facility maintenance such as snow forks. These forks attach to front end loaders and can transfer materials like for example soil, snow and dirt. Other popular cleanup accessories consist of standard sweepers and magnetic sweepers. Standard sweepers consist of a broom which the forklift forks hook onto for sweeping big spaces like parking lots or warehouse and factory floors. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in areas where there is lots of metal debris like on shop floors for instance. Sweepers have widths as much as sixty inches and this surface area makes clean up effortless and quick.

A material spreader is another lift truck accessory that is often utilized at facilities. These spreaders are handy for a range of applications like spreading pellets, fertilizers, insecticides, seeds, ice melt and rock salt.

Another optional lifting attachment are work platforms. These could be utilized by many different businesses daily. Platforms may differ in size from 36" x 36" to up to 60" x 60". Some models may be offered and are capable of folding up and storing into a smaller place. Work platforms are designed to raise workers up to an overhead location with the use of the lift truck. Larger platform models have extra space for workers so as to carry tools and other essential objects meant for the task. Often work platforms are made of poly material or steel.
